No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel human antibody (I), preferably a human CC monoclonal antibody which binds to an activation inducible lymphocyte immunomodulatory molecule (AILIM). (I) is useful for modulating signal CC transduction into a cell mediated by AILIM, for modulating signal CC af AILIM-expressing cells, for modulating production of a cytokine from CC AILIM-expressing cells, and for inducing antibody-dependent cytotoxicity (CC AILIM-expressing cells and/or immune cytolysis or apoptosis of CC prophylaxis of delayed type allergy. (I) is useful for treating, preventing or CC prophylaxis of delayed type allergy. (I) is useful for treating and CC costimulatory transduction, and for inhibiting the onset and/or advancement of the diseases associated with AILIM-mediated (CC costimulatory dermatosis, allergic contact-type dermatitis, CC cinsulin-dependent diabetes mellitus, psoriasis, autoimmune or allergic contact-type dermaticis, CC disorders, inflammation, graft versus host reaction, graft versus host reaction, graft versus host caction, graft versus host caction, graft versus host caction, graft versus host caction, graft versus host caction, graft versus host caction, graft versus host caction, graft versus host caction, graft versus host caction, graft versus host caction, graft versus host caction, graft versus host caction, graft versus host caction, graft versus host caction, disorders such as contact-type dermatitis, and contact-type dermatitis, and contact-type dermatitis, and contact-type dermatitis, and contact-type dermatitis, and contact-type dermatitis, and contact-type dermatitis, and contact-type dermatitis, and contact-type dermatitis, contact-type dermatitis, contact-type dermaticity (HAMA) in a host.
                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New human monoclonal antibody that binds to activation inducible lymphocyte immunomodulatory molecule, useful for treating rheumatoid arthritis, multiple scierosis and inflammation

                                                                                                                                                                                                                                                                                                                                  The present sequence is the human immunoglobulin superfamily protein CC IGFAM-10. Its gene was isolated from a cDNA library of colon CC tissue. It is expressed in reproductive, gastrointestinal and CC cardiovascular tissue, where cancer and inflammation are common. The gene, protein, its antibodies, agonists and antagonists are suitable for CC diagnosing and treating many diseases, including cancer, immune system CC disorders (such as inflammation, AIDS, allergies, anaemia, CC disease, diabetes mellitus, emphysema, Graves' disease, hepatitis, CC multiple sclerosis, shoriasis, rheumatoid arthritis, scleroderma, CC multiple sclerosis, psoriasis, rheumatoid arthritis, scleroderma, CC systemic lupus crythematosus and ulcerative colitis, complications of CC cancer, haemodialysis and extracorporeal circulation, trauma and CC haematopoietic cancer (such as leukaemia) and infections caused by CC bacteria, viruses, fungi or parasites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Immunoglobulin superfamily proteins, the agonist and antagonist of the protein is useful for preventing and treating disorders associated will altered levels of the protein such as cancer, immune system disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 2000-387796/33.

                                                                                                                                                                                                                                                                                                                                                                      19-NOV-1998;
22-DEC-1998;
07-APR-1999;
                 The present sequence is the human immunoglobulin superfamily protein IGFAM-1. Its gene was isolated from a cDNA library of synovial membra tissue. It is expressed in reproductive, gastrointestinal and cardiovascular tissue, where cancer and inflammation are common. The gene, protein, its antibodies, agonists and antagonists are suitable
   gene, protein, diagnosing and
                                                                                                                                                               Immunoglobulin superfamily proteins, the agonist and antagonist of protein is useful for preventing and treating disorders associated altered levels of the protein such as cancer, immune system disorder

Its gene was isolated from a cDNA library of lung tumour tissue. It is expressed in reproductive, gastrointestinal and cardiovascular tissue, where cancer and inflammation are common. The gene, protein, its antibodies, agonists and antagonists are suitable; disgrowing and treating many disease, including cancer, immune system disorders (such as inflammation, AIDS, allergies, anaemia, arteriosclerosis, asthma, atherosclerosis, cholecystitis, Crohn's disease, diabetes mellitus, emphysema, Graves' disease, hepatitis, systemic lupus crythematosus and ulcerative colitis), complications of ancer, haemodialysis and extracorporeal circulation, trauma and haematopoietic cancer (such as leukaemia) and infections caused by

The invention relates to 2175 novel human ovarian antigens (ABP41054-CC ABP43228) and to cDNAs encoding them (ABQ54131-ABQ56305), and also CC encompasses polypeptides 90% identical and polynucleotides 95% identical to the sequences of the invention. The invention additionally relates to CC recombinant vectors and host cells comprising human ovarian antigen CC polynucleotides, antibodies against human ovarian antigens, and the use CC of ovarian antigen polynucleotides and polypeptides in diagnosing, CC treating, prognosing or preventing various ovary and/or breast-related CC metastatic tumours of ovarian or breast origin, reproductive system CC disorders (e.g., infertility, disorders of pregnancy, anovulation, CC polycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine CC disorders, infections (e.g., chamydia, HIV, toxoplasmosis, and toxic cyginitis), immune disorders (e.g., congenital and acquired communodeficiencies, autoimmune oophoritis, systemic lupus erythematosus), conditions (e.g., anaemia), cardiovascular disorders, include on the conditions (e.g., anaemia), cardiovascular disorders, include on the conditions (e.g., anaemia), cardiovascular disorders, include on the conditions (e.g., anaemia), cardiovascular disorders, include on the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of the conditions of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         and wrinary system disorders. Ovarian antigen polypeptides and polynucleotides may also be used in screening for compounds which modulate ovarian antigen expression or activity. The polynucleotides may further be used for gene therapy, chromosome mapping, in the identification of individuals and in forensic analysis, and the polypeptides may be used as food additives or to prepare antibodies useful in disease diagnosis, drug targeting and phenotyping. The present sequence represents a human ovarian antigen of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

cc shock syndrome), inflammatory conditions (e.g., mastitis, ophoritis and cryaginitis), immune disorders (e.g., congenital and acquired immunodeficiencies, autoimmune ophoritis, systemic lupus erythematosus), cc immunodeficiencies, autoimmune ophoritis, systemic lupus erythematosus), cc immunodeficiencies, autoimmune ophoritis, systemic lupus erythematosus), cc immunodeficiencies (e.g., anaemia), cardiovascular disorders, cc and urinary system disorders. Ovarian antigen polypeptides and cc modulate ovarian antigen expression or activity. The polynucleotides may also be used in socreening for compounds which cc modulate ovarian antigen expression or activity. The polynucleotides may cf further be used for gene therapy, chromosome mapping, in the cidentification of individuals and in forensic analysis, and the cc polypeptides may be used as food additives or to prepare antibodies couseful in disease diagnosis, drug targeting and phenotyping. The present sequence represents a human ovarian antigen of the invention.

Cc Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP43228) and to cDNAs encoding them (ABC54131-ABC56305), and also encompasses polypeptides 90% identical and polynucleotides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen polynucleotides, antibodies against human ovarian antigens, and the use of ovarian antigen polynucleotides and polypeptides in diagnosing. Treating, prognosing or preventing various ovary and/or breast-related disorders. Such conditions include ovarian cancer and breast cancer, and metastatic tumours of ovarian or breast origin, reproductive system disorders (e.g., infertility, disorders of pregnancy, anovulation, polycystic ovary syndrome, ovarian cysts, and dysmenornhoea), endocrine disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic shock syndrome) inflammatory conditions (e.g., satistic conductive and shorters of pregnancy and toxic shock syndrome) inflammatory conditions (e.g., satistic conductive and shorters).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            useful in the prevention, treatment and diagnosis of cancer (e. ovarian cancer), immune disorders, cardiovascular disorders and neurological diseases -

The recombinant protein binds to HIV 9p160. See also AAQ20066 and AAQ20068.

The antibodies can bind to human Tumour Growth Factor-beta (TGF-beta) II receptor, resulting in the inhibition of the signal transduction of human TGF-beta into cells. The antibodies can be used for the prevention and treatment of diseases associated with the production of TGF-beta, such as tissue fibrosis in the lung, liver, skin, kidney or other tissues, atherosclerosis, atopy, keloid and arthritis. The present sequence was

A polypeptide (AAW11638) comprises a leader sequence, RF-1 light chain variable region (see also AAW11634), and human kappa constant region. RF1 is a human monoclonal antibody. (hMAb) specific for the fusion protein of respiratory syncytial virus (RSV). The polypeptide can be produced in eukaryotic host (e.g. CHO) cells transfected with vector NEOSPLA incorporating a DNA construct (AAT61240) including the RF-1 VL sequence. The and RF-2 heavy and light chains (see also AAW11639-41) are similarly produced. The transfected host cells provide a constant, stable supply of anti-RSV F-protein hMAbs for use in the treatment or prevention of RSV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Key
